

Buddi Clip GPS Victim Unit

Advanced Tracking

Technology

Buddi's Clip uses the same reliable tracking hardware as the Buddi SmartTag[®], but it is conveniently packaged to fit easily in a pocket or purse, or it can be attached to a keychain with the included lanyard. The Clip features an LED that indicates the charge status and a panic button to transmit the current location.

Why Buddi's Victim Unit?

By harnessing the proactive features of the Buddi Eagle software, the Clip device is assigned to a victim/survivor and configured in minutes. A moving exclusion zone is set up with an associated Tag wearer or wearers, spanning a diameter of up to virtually any distance. The Clip, always on guard, calculates its location every minute and calls into the data center every 5 minutes to update its location relative to associated aggressor wearers. Notifications, acting as a safety net, are sent directly to the victim's cell phone or any SMS/email address, providing a constant sense of security.

For added versatility, inclusion and exclusion zones can be set for the victim. These zones serve as reminders and aids in monitoring the victim's behavior, making the Clip a comprehensive personal safety and monitoring solution.

- Buddi Clip Hardware
- Integrated GPS
- Two-way Voice Communication
- Discreet
- Panic Button (optional)
- Easy to Set Up
- Two-Hour Charge
- Scheduled Alerts
